

# ANTI-FRAGILE

# PACKAGING

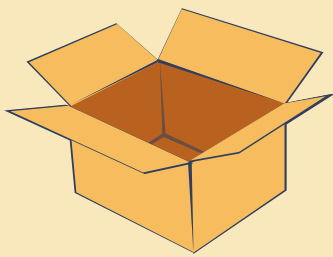

## Advice By Global India Express

To prevent damage during transportation, it is important to properly package and handle delicate glassware and ceramics.

### FOLLOW THESE STEPS FOR ANTI-FRAGILE PACKAGING

**High-quality materials.** It may cost more, but the protection of your product is number one. It prevents bumps on the products, inside and out. Remember to use fragile tape to cover the crease mark.

**Pick the exact-size box.** It also minimizes the movement of the products. Leave a small space for the cushion.

**Wrap the items.** When transporting an item, use bubble wrap to cover it and fill any gaps with paper to prevent damage from movement.

**Double protection with cushions.** Fill the space in the box with cushioning material without overfilling it. Then, put the products in the center of the box.
